Website Development Case Studies

This document describes three example web projects, their goals, major features, intended users, and practical benefits. Each case study is followed by its corresponding website image.

Case Study 2: College Information and Admissions Website

Overview

The College Information and Admissions Website provides prospective students and parents with a central place to explore a college, compare courses, learn about facilities, and understand the admission process. A clear layout helps visitors find reliable information without needing to contact the college for every basic query.

Objectives

- Present accurate information about the college, departments, courses, and campus facilities.
- Explain eligibility requirements, important dates, documents, and application steps.
- Improve communication between applicants and college staff.

Key Features

- College profile, faculty details, course descriptions, and facilities.
- Admissions section with eligibility, application instructions, and contact information.
- Events and announcements for campus activities and deadlines.
- Responsive navigation and mobile-friendly page layout.
- Contact details and enquiry options for prospective students.

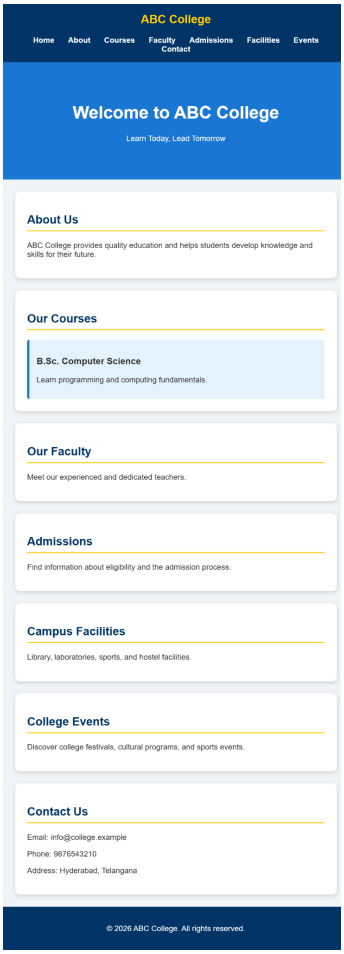

Target Users

Prospective students, parents or guardians, faculty, college administrators, and applicants.

Benefits

- Makes college information easier to access at any time.
- Reduces repeated enquiries and manual information sharing.
- Helps applicants understand requirements and prepare documents.
- Improves the institution's online presence and transparency.

Case Study 8: Online Food Ordering Website

Overview

The Online Food Ordering Website lets customers browse food items, review prices, and place orders online. It presents restaurant offerings in a convenient format and can support delivery or pickup, helping customers order meals without visiting the restaurant in person.

Objectives

- Make ordering food simple and convenient.
- Show menu items, prices, and special offers clearly.
- Help restaurants receive and manage customer orders.

Key Features

- Menu cards with food images, descriptions, and prices.
- Order buttons and a shopping-cart or checkout flow.
- Restaurant contact information and customer support details.
- Offers, discounts, and featured dishes.
- Potential payment, order confirmation, and delivery-status integration.

Target Users

Customers, restaurant owners and staff, and food delivery partners.

Benefits

- Saves customers time and makes menus available online.
- Helps restaurants promote popular items and special offers.
- Can reduce ordering mistakes through structured order details.
- Provides a foundation for adding online payments and order tracking.

Case Study 27: Business Analytics Dashboard

Overview

The Business Analytics Dashboard brings key business measures into a single visual interface. Summary cards, charts, and activity tables help users monitor performance, identify changes, and make decisions based on data rather than relying only on manual reports.

Objectives

- Summarize important metrics such as revenue, sales, and user activity.
- Make performance trends easier to understand.
- Support timely decisions by presenting business information in one place.

Key Features

- Metric cards for revenue, users, sales, and growth.
- Charts showing weekly or monthly trends.
- Recent activity or transaction tables with status and amount.
- Navigation for areas such as overview, sales, users, and activity.
- Possible future additions include date filters, exports, alerts, and role-based access.

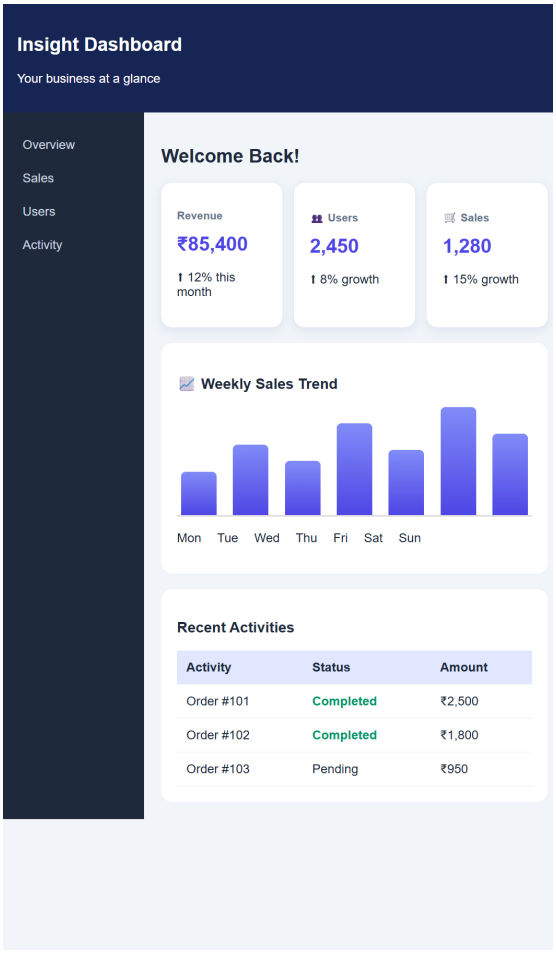

Target Users

Business owners, managers, sales teams, analysts, and decision-makers.

Benefits

- Provides a quick overview of business performance.
- Helps users spot trends and unusual changes sooner.
- Reduces time spent assembling separate reports.
- Supports clearer planning and communication across teams.
